Engineered Interconnection Solutions

-Since 1919-

Zierick Printed Circuit Board Terminal Insertion Hand Tools

Zierick's printed circuit board terminal insertion hand tools offer a simple, reliable and repeatable method for performing press fit and splay mounted terminal assemblies. It is especially economical for low volume, short run and prototype applications. Zierick's insertion hand tools incorporate interchangeable components. A single hand tool can be used for several terminal insertion applications. Hand tools are available for all standard PCB mountable quick disconnect male and female terminals. Special tools can be provided for special applications.

Where increased application flexibility is required, hand tools may be incorporated with manually or automatically operated presses. The Insertion Tool allows for terminal application by press fit, and also the much preferred splay mounting.

Zierick hand tools are available for printed circuit board mounted .110", .187", .205" and .250" horizontal and vertical Quick Disconnect terminals, for .110", .187", .250" vertical Quick Disconnect receptacles, for Test Point Terminals and for .205" x .025" vertical automotive Blade Fuse receptacles. Lower board support application tool dies are available for single or dual leg splay mounting requirements.

Insertion Tool with Splaying Anvil

The Insertion tool can easily be installed on almost any type of press machine. Zierick manufacturing suggests that this is done to provide for splaying of the terminal. When terminals are splayed, they are locked into place, improving reliability, preventing part removal and rotation, even with mounting hole tolerances as large as $\pm .004$ ".

The insertion Tool body is removed, and installed onto the press. The Anvil is mounted and aligned, so the terminal may be splayed. The Quick Disconnect is then placed in the "nest" of the Insertion Tool, and the P.C. Board is aligned with the terminal. The downward motion of the press inserts the terminal through the P.C. Board, causing the legs to spread or splay (shown at right). The Press is then pulled up, and the Quick Disconnect is permanently inserted into the P.C. Board. This type of insertion is ideal for those who wish high quality splayed insertions, but due to low volume an automated insertion machine would be impractical.

At higher volumes, we recommend Zierick model 9700, and 9700 XY automated terminal insertion machines.

Instructions for Insertion Tools ZPT81-A & ZPT92

ZPT81-A:

This Insertion Tool is Factory Assembled to accommodate Tab Part Number 836 (.250" x .032" Tab). For other Tab or Quick Disconnect sizes, refer to the 'POSITIONER PLATE SELECTION TABLE'.

ZPT92:

This Insertion Tool is Factory Assembled to accommodate Tab Part Number 901 (.250-90 Degrees x .032"). For other Tab or Quick Connect sizes, refer to the 'Positioner Plate Selection Table'.

To Change The Positioner Plate:

1. Remove the two Security Screws, the Retainer Plate and the Detent Plate.
2. Place the desired Positioner Plate onto the Tool Holder, with the Correct Terminal sized opening toward the front of the Tool Holder.
3. Replace the Detent Plate and the Retainer Plate.
4. Replace the two security screws, but do not tighten them.
5. Hold the Tool Assembly vertically downward against a flat surface, to align the inserted parts.
6. While in this position, tighten the two security Screws.
7. The Insertion Tool is now ready for use.

Positioner Plate Selector Table

Tool Type	PC Terminal Part Number	Tab Size and Type	Positioner Plate Number
ZPT81-A	836 906 1021	.250 Male	91-804-0190
